GREEN ENERGY IN UKRAINE

Types of renewable energy in Ukraine

GREEN ENERGY IN UKRAINE

8 percents of our electricity comes from renewable sources

According to our government calculations, harmful emissions into the atmosphere are reduced by **9.2 million tons of CO2 per year**, which is comparable to the emissions of almost 4.5 million cars.

Another side of the coin. Domestic problems:

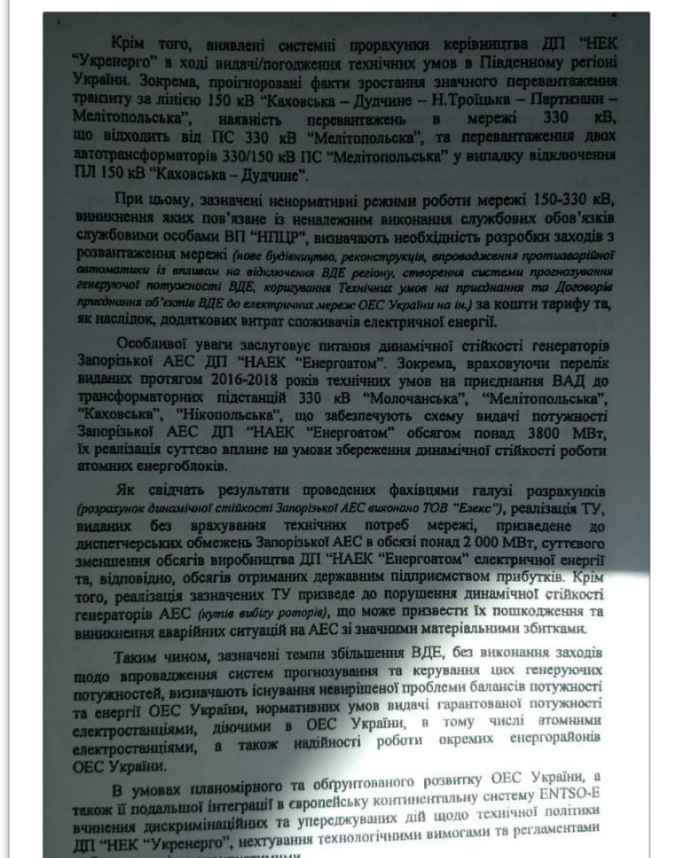

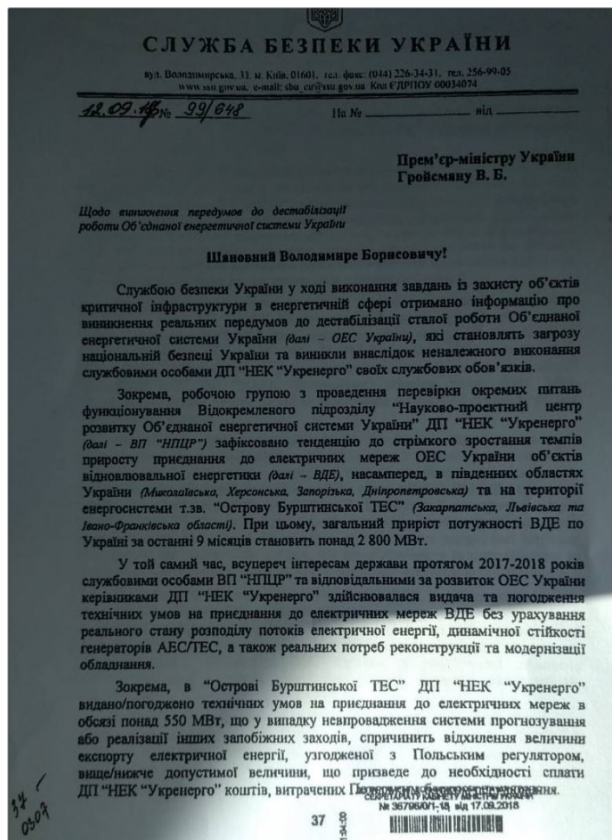

1. Very high electricity bills for consumers.
2. Instability of electricity generation from solar plants + the risk of emergency.

My article for OCCRP:

<https://www.occrp.org/en/investigations/the-rich-and-powerful-cash-in-from-ukraines-green-energy-gold-rush>

The screenshot shows the top of a web article. At the top left is the OCCRP logo. To its right is the text 'INVESTIGATIONS · THE RICH AND POWERFUL CASH IN FROM UKRAINE'S GREEN ENERGY GOLD RUSH'. Further right are social media icons for Facebook, Twitter, and YouTube, followed by the word 'Русский'. Below this is a large image of solar panels. Overlaid on the image is the title 'The Rich and Powerful Cash In From Ukraine's Green Energy Gold Rush' in large white text. Below the image, on the left, is a credit line: 'Credit: Rustam Rashydov, Bihus.info'. On the right is the author information: 'by Alisa Yurchenko' and '9 May 2019'. At the bottom left is a paragraph of text: 'Despite Ukraine's deserved reputation for long and bitter winters, there are few places more lucrative to build a solar power plant.' Below this is another paragraph: 'The country is now undergoing a boom in green energy investment, pushed by big government incentives that will become less lucrative for plants that start service after'. At the bottom right are three buttons: a Twitter icon, a Facebook icon, and a blue button with a heart icon and the word 'DONATE'.

Credit: Rustam Rashydov, Bihus.info

Despite Ukraine's deserved reputation for long and bitter winters, there are few places more lucrative to build a solar power plant.

The country is now undergoing a boom in green energy investment, pushed by big government incentives that will become less lucrative for plants that start service after
