

CHERRY PICKING (AND HOW TO AVOID IT)

ALBERTO PULIAFITO

Without data, you're just another person with an opinion

Yes, but with a selection bias, you're someone with awful data and very bad conclusions

«I see some who are mightily given to study and comment upon their almanacs, and produce them to us as an authority when anything has fallen out pat; and, for that matter, it is hardly possible but that these alleged authorities sometimes stumble upon a truth amongst an infinite number of lies. ... I think never the better of them for some such accidental hit. ... [N]obody records their flimflams and false prognostics, forasmuch as they are infinite and common; but if they chop upon one truth, that carries a mighty report, as being rare, incredible, and prodigious»

Michel de Montaigne (1533-1592) - Essay on Profecies

Coronavirus, lockdown e stop alle industrie servono davvero? Lo studio italiano

Sarebbero solo i primi 17 giorni successivi all'applicazione delle misure di contenimento a determinare l'entità della diffusione del contagio nella pandemia di Covid-19, che sembrerebbe dipendere dunque esclusivamente dai focolai divampati per caso nei primi giorni (come quello successo all'ospedale di Codogno o la partita Atalanta-Valencia) e non dalle differenze nel rigore del lockdown. Di conseguenza, qualsiasi misura restrittiva applicata dopo i primi 17 giorni (come la chiusura delle industrie o i divieti alla libertà di movimento dei cittadini) inciderebbe poco o nulla sull'andamento dei contagi e sul numero finale delle vittime.

Avoid wishful thinking

Don't be fascinated by who is
telling the opposit of anyone else

**Sometimes, counter-intuitive idea means
that the idea's wrong!**

Look for the counterfactual

**Rapresentation
avoid selection bias**

Be sure that you can trust your
source. Know your source agenda
